Reflection & Technical Skills Report

Packet Trace Project – Phase 1

Name: Martin Von Holtzhausen
Student Number: 45628467
MODULE: CMPG-315
INSTITUTION: NORTH WEST UNIVERSITY

Contents

1. Introduction 2

2. Course 1: Manage Your Time 2

Overview Of Course 1: 2

Technical Skills Learned for Course 1: 2

Reflection On Course 1: 2

3. Course 2: Git Started with GitHub 3

Overview Of Course 2: 3

Technical Skills Learned for Course 2: 3

Reflection On Course 2: 3

4. Course 3: Git Expert (4 Hours) 3

Overview Of Course 3: 3

Technical Skills Learned for Course 3: 3

Reflection On Course 3: 3

5. Course 4: Project and Project Management 4

Overview Of Course 4: 4

Technical Skills Learned for Course 4: 4

Reflection On Course 4: 4

6. Course 5: Cisco Packet Tracer 5

Overview Of Course 5: 5

Technical Skills Learned for Course 5: 5

Reflection On Course 5: 5

7. Overall Skills Development 5

8. Conclusion 5

1. Introduction

This report reflects on the online courses that I have completed to improve my technical skills. These courses covered topics including time management, version control, Git and GitHub documentation, project management, and network simulation with Cisco Packet Tracer. The courses provided valuable knowledge and practical insights, helping me better understand how these tools and concepts work and how to use them effectively. The purpose of this reflection report is to explain the skills I have developed and how they can be applied in future academic or in the IT industry.

2. Course 1: Manage Your Time

Overview Of Course 1:

This course focused on improving productivity through better time management techniques. It also explained how individuals can organize their work, develop routines, and focus on tasks that contribute to their long-term goals.

Technical Skills Learned for Course 1:

- I learned how to create structured routines to decide what tasks should be worked on.
- I learned how to develop a morning routine to improve productivity.
- I learned how to create step-by-step plans for long-term, weekly, and daily goals.
- I learned how to use time management tools and spreadsheets to manage tasks more effectively.

Reflection On Course 1:

This course has helped me understand the importance of focusing on tasks that move me closer to my goals. I also learned that working in uninterrupted time blocks can greatly improve productivity. This course showed me how proper time management and routines can reduce wasted time and improve overall efficiency.

3. Course 2: Git Started with GitHub

Overview Of Course 2:

This course introduced the basics of Git and GitHub and explained how version control systems are used to manage and track changes in projects.

Technical Skills Learned for Course 2:

- I learned how to save project changes using source control.
- I learned how to clone a repository from GitHub to a local computer.
- I learned how to create a new repository on GitHub.
- I learned how to install and configure Git on a Windows computer.

Reflection On Course 2:

This course provided a strong introduction to GitHub and showed why version control is important for both academic projects and professional software development. These tools are widely used in industry and will be valuable in my future career.

4. Course 3: Git Expert (4 Hours)

Overview Of Course 3:

This course expanded on the fundamentals of Git and GitHub and explained the differences between the two systems, while demonstrating how they work together.

Technical Skills Learned for Course 3:

- I learned how to interact with GitHub repositories.
- I learned how repositories work and how to create them locally and remotely.
- I learned how to use the Git staging area.
- I learned how to use commands such as add, commit, remove, and checkout.
- I learned how to create, manage, and merge branches.

Reflection On Course 3:

This course helped me understand why Git and GitHub are essential tools in software development. They provide a secure and structured way of managing and sharing project files. The knowledge gained from this course will help me collaborate more effectively in future projects.

5. Course 4: Project and Project Management

Overview Of Course 4:

This course introduced the fundamentals of project management and explained how projects are planned, organised, and executed in a structured way.

Technical Skills Learned for Course 4:

- I learned how project workflows are structured and how project phases are planned.
- I learned how to break projects into smaller tasks and schedule them effectively.
- I learned the basics of risk management and how to identify potential project risks.
- I learned the importance of team coordination and monitoring project progress.

Reflection On Course 4:

This course helped me gain a better understanding of how projects are organized and managed. These skills will help ensure that projects are completed successfully and within deadlines.

6. Course 5: Cisco Packet Tracer

Overview Of Course 5:

This course introduced Cisco Packet Tracer and explained how it can be used to simulate networks without requiring physical networking equipment.

Technical Skills Learned for Course 5:

- I learned how to navigate the Cisco Packet Tracer interface.
- I learned how to create simple networks and connect multiple devices.
- I learned how to configure devices and assign IP addresses.
- I learned how to simulate wireless connectivity between devices.
- I learned how to customize the Packet Tracer workspace.

Reflection On Course 5:

This course helped me understand how networking environments can be simulated and tested using software tools. It allowed me to experiment with network configurations and better understand how devices communicate within a network.

7. Overall Skills Development

Completing these courses helped me develop both technical and professional skills that are important in the field of information technology. I improved my understanding of productivity management, version control systems, project planning, and network simulation. These skills will support my academic projects and will also be useful in my future career.

8. Conclusion

In conclusion, the courses provided valuable knowledge and practical skills that can be applied in both academic and professional environments. Each course contributed to improving my understanding of important tools and concepts used in the technology industry.
